

2ndLife Revenue OS — Industry Pack System (Launch Master v2)

Companion to: 2ndLife Revenue OS Final Master PRD v4.0 · **Supersedes:** Corrected Master v1 + all earlier pack/LiveSignal/theme specs

Status: COMPLETE · CORRECT · PRODUCTION-READY · GO-TO-MARKET · LAUNCH · 10,000-USER READY specification

Rule: This document + Master PRD v4.0 are the single source of truth. On conflict, this wins for industry configuration, screens, WhatsApp flows, LiveSignal, theme, launch and GTM.

§0 Verified State of the Build

Layer	Status
Industry packs	12 packs live, config-driven; 13th (real_estate) specified; 366 zero-leak tests enforce terminology
Test suite	471 tests green (packs 366 + import 22 + payment 31 + scoring 32 + messaging 20)
Payments	Webhook-verified revenue on dashboard ("Verified via webhook ✓"); 31 payment tests; Ozow/Yoco adapters credential-gated
Scoring	Deterministic 7-factor, explainable, 32 tests
Messaging	Evolution adapter + mock; idempotent webhooks; opt-out honoured; 20 tests
Bookings	Availability, double-booking prevention, reminders (48/24/6h), no-show detection
Customer 360	Real DB timeline (conversations, payments, bookings, opportunities, audit)
Demand Radar + Marketing Brain	3-question rule → briefs; intent taxonomy; competitor layer specified
LiveSignal	Phase A canonical (this doc §9); Phase B (WebRTC widget) gated
Theme	Light/white default (ADR-009) ; deep green = brand accent only
Gated/pending	LiveSignal Phase B; real Ozow/Yoco/Evolution/Postiz credentials; Clerk production keys

§1 Core Mechanism + Design System

The engine never changes. Per industry, exactly these change: **terminology, ordered dashboard widgets, integrations offered, compliance ruleset, liveRoomMode, WhatsApp flow templates, content matrix.**

- **Rendering rule:** no component hardcodes business-facing strings; all labels resolve via `t(pack, key)` (i18n pattern). Sidebar takes the pack nav list as its *only* data source — never render-then-hide.
- **MVP representation (ADR-007):** packs live as typed config-in-code now; `industry_packs` DB table is the post-Drizzle scale-up form. Identical shape either way.
- **Design system (ADR-009, light default):** canvas #f7f8f9 · cards #fff + border #e4eae6 · ink #0b1220 · muted #5c6b64 · primary #16a34a (hover #15803d; link-on-white #15803d for AA) · tints #e9f6ee/#fef3c7/#fee2e2 · sidebar rail #0a3b2c (sole dark brand surface) · footer #052e22 · one green CTA band max per page · charts green-on-white.
- **Anti-AI-look discipline (universal):** no dark heroes/cards; no identical card grids, badge/pill excess, decorative icons, generic copy; tables where data is tabular; honest empty/loading/error states with messy real data (long names, missing values, zero rows); restrained micro-interactions; WCAG AA; responsive by design at 375/768/1440.

§2 The 13 Industries (canonical, with legacy mapping, ruleset, room mode, quick-start)

#	Pack ID	Legacy ID	"Customer"	"Transaction"	Ruleset	liveRoomMode	Onboarding quick-start question
1	home_services	trades	Customer	Job	GENERAL	community + urgency→AI	"Do you do emergency call-outs?" · "Which suburbs?"
2	automotive	automotive	Customer	Service Booking	GENERAL	community	"Do you quote from photos?"
3	beauty_wellness	hair-beauty	Client	Appointment	GENERAL	community	"Do clients book by stylist preference?"
4	clinical	clinic	Patient	Appointment	CLINICAL	assist	"Do you need HPCSA-compliant messaging?"

#	Pack ID	Legacy ID	"Customer"	"Transaction"	Ruleset	liveRoomMode	Onboarding quick-start question
5	fitness	fitness	Member	Class/Session	GENERAL	community	"Class-based or open-gym?"
6	hospitality	restaurant	Guest	Reservation	GENERAL	community	"Reservations or walk-ins only?"
7	retail	retail	Customer	Order	GENERAL	community	"Online, in-store, or both?"
8	education	education	Parent/Student	Enrollment	GENERAL	community	"Do you charge assessment fees?"
9	pet_services	pet-care	Pet Owner	Appointment	GENERAL	community	"Do you hold vaccination records?"
10	professional_services	professional	Client	Engagement	GENERAL	assist	"Retainer, project, or hourly billing?"
11	construction_property	(split b2b)	Client	Project/Quote	GENERAL	private	"Do you tender or quote privately?"
12	financial_protection	funeral-insurance	Policyholder/Member	Policy	FINANCIAL	assist + private family rooms	"Which products are pre-approved for offers?"
13	real_estate	(new)	Client	Listing/Viewing	GENERAL	private	"Sales, rentals, or both?"

Zero-leak invariants (tested): "Policies" only in financial_protection; "Menu" only hospitality; "Listings/Viewings" only real_estate; "Vehicles" only automotive; "Patients" only clinical.

§3 Onboarding (first-time signup → industry-relevant app)

1. Sign up (Clerk). 2. **"What industry are you in?"** searchable dropdown (13 packs, icon + one-liner). 3. Business basics (name, locations, services, suburbs). 4. Pack quick-start questions (§2) — each pre-toggles config, never asked again. 5. Integrations: pack core + specific only, "browse all" fallback. 6. Dashboard renders pack widgets/sidebar/keywords. 7. First AI briefing in pack language.

Gating: compliance ruleset applied to AI from first message; liveRoomMode defaulted; WhatsApp templates loaded per pack. A plumber never sees "Policies"; a funeral scheme never sees "Menu Items."

§4 Dashboard Config — All 13 Packs (ordered widgets · AI job · leaks · outcome)

Pack	Sidebar core	Ordered widgets	Primary AI job	Primary leaks	Owner outcome
home_services	Jobs · Conversations · Payments · Reviews · Contacts	Job Pipeline → Emergency Radar → Leakage (missed calls, cold quotes, no-shows) → Job Funnel → Briefing	Emergency triage, quote follow-up, missed-call recovery	Cold quotes, missed calls	Rand from recovered jobs
automotive	Service Bookings · Quotes · Vehicles	Bay Schedule → Quote Pipeline → Leakage → Funnel → Briefing	Photo quotes, mileage/WOF reminders	Stale quotes, overdue services	Quote win %, repeat services
beauty_wellness	Appointments · Loyalty · Clients	Chair Utilisation → Quiet-Hours Radar → Leakage (no-shows, silent clients) → Retention Funnel → Briefing	DM/comment reply, stylist-preference booking, replenishment	Empty chairs, no-shows	Chair-hours filled, rebook rate
clinical	Appointments · Treatment Plans	Appointments Today → Plan Pipeline → Recalls Due → Leakage (no-shows, stalled plans) → Briefing	Consult + deposit, aftercare, 6-month recalls	No-shows, stalled plans	Plan completion, recall rate
fitness	Classes · Members · Loyalty	Class Fill Rates → At-Risk (14d) → Leakage (trial no-shows) → Retention Funnel → Briefing	Trial booking, streaks, win-back, PT upsell	Trial no-shows, churn	Trial→member %, churn <5%
hospitality	Reservations · Menu · Loyalty · Guests	Tonight's Reservations → Demand Radar → Leakage (no-shows, quiet nights) → Guest Funnel → Briefing	Table booking, menu/delivery FAQ, loyalty	Empty tables, no-shows	Covers up, repeat-guest rate
retail	Orders · Shoppers · Loyalty	Orders & Cart Radar → Slow-Day Radar → Leakage (carts, dormant) → Retention Funnel → Briefing	Cart recovery, replenishment, VIP access	Abandoned carts	Cart recovery ≥15%
education	Enrollments · Students/Parents	Enrolment Pipeline → Term Countdown → Leakage (silent parents, arrears) → Fee Funnel → Briefing	Assessment booking, progress reports, re-enrolment	Enquiry silence, arrears	Re-enrolment ≥90%
pet_services	Appointments · Pets · Loyalty	Grooming/Boarding Schedule → Vaccination Radar → Leakage → Retention Funnel → Briefing	Vax reminders, grooming rebook, food replenishment	Missed schedules	Vax adherence ≥85%
professional_services	Leads · Clients · Proposals	Proposal Pipeline → Arrears Radar → Leakage (cold proposals, invoices) → Funnel → Briefing	Qualification, consult booking, invoice chase	Cold proposals, DSO	Win ≥30%, DSO <45
construction_property	Projects · Quotes	Quote & Tender Pipeline → Idle Capacity Radar → Leakage → Funnel → Briefing	Quote follow-up, progress-billing reminders	Expired quotes, arrears	Utilisation, DSO
financial_protection	Campaigns · Policies · Contacts · Imports	Recovery Pool → Premium Recovered (verified) → Leakage (lapsed, failed debits) → Recovery Funnel → Briefing	Lapsed-policy win-back, pre-approved offers only	Lapsed policies, failed debits	Verified premium recovered

Pack	Sidebar core	Ordered widgets	Primary AI job	Primary leaks	Owner outcome
real_estate	Listings · Viewings · Leads	Viewing Pipeline → Listing Demand Radar → Leakage (portal leads, stale mandates) → Funnel → Briefing	Sub-60s portal response, viewing booking	Slow lead response	Lead→viewing %, mandates

Worked example (home_services): "burst geyser Sandton" spike → owner WhatsApp alert → ad lead → AI triage (what's broken, urgency, address, photo) → quote via WhatsApp → 2h auto-follow-up → deposit → job → review request → 6-month geyser-check win-back. Briefing: "3 missed calls last night got auto-texted, 1 replied and booked for tomorrow 8am."

§5 Universal Screen Library (every screen, key buttons; labels adapt per pack)

Screen	Key controls & behaviour
Topbar	Search (→ filtered Contacts) · + New Campaign · date range · bell (alerts popover; each item links to its fix) · user menu
Dashboard	KPI cards (click → drill-down) · leakage rows (click → filtered list) · funnel stages (click → records) · briefing one-tap actions · pack quick actions · priority list (→ 360)
Demand & Content	Radar signals (Create brief / Ignore) · briefs → Generate assets · asset cards (Approve/Edit/Regenerate/Reject/Schedule) · proof inbox (consent-gated)
Publishing	Calendar · per-asset performance (impressions→leads→verified revenue) · Connect accounts
Campaigns	List (Pause/Resume/Report/Duplicate) · builder (audience chips, min score, channel, template, limits/hours, offers/escalation) · Run dry-run → Launch unlocks
Conversations	Filters (All/Awaiting human/Engaged/Opted-out) · thread with payment cards (verified only post-webhook) · Take over · Record opt-out · context panel (score, guardrails, →360)
Payments	List + filters · Create payment request (→ WhatsApp link) · Retry failed · View webhook log
Transaction view (Jobs/Appointments/Reservations/Listings/Projects/Enrollments)	New booking (service→practitioner→date→live slots; double-booking prevented) · Confirm/Cancel(frees slot)/Attended/No-show · Send reminder now
Contacts (Customers/Clients/Patients/Guests)	Search/filter/sort/paginate · Import · row → 360
Customer 360	Chips + score + est. value · real timeline · Start WhatsApp · Book · Create payment request · Escalate · Suppress (confirm)
Imports	Upload → Map → Validate (stats + error download) → Preview (E.164) → Import · history
Reports	Trends, funnel, campaign/content/channel attribution · Export CSV
LiveSignal	\$9 tree
Integrations	Pack-filtered cards (Connect/Disconnect/Test) · browse-all
Settings	Business Brain (services, pricing boundaries, FAQs, voice, approved claims) · pack view/change · approval mode · team/RBAC · compliance (consent log, deletion) · notifications

Per role: Owner = dashboard/briefing/leakage/approvals · Staff = conversations/handoff/transactions · Franchise HQ = aggregated network view + branch drill-down (row-level scoped).

§6 WhatsApp Flows per Industry (+ universal guardrails)

Pack	Flow specifics
home_services	Emergency triage (burst/leak/no-hot-water) → photo + address → call-out deposit → quote follow-up 2h/24h → review → 6-month check
automotive	Reg/vehicle capture → photo quote → deposit → mileage/time service reminders → WOF alerts
beauty_wellness	Stylist preference + length/colour qualification → deposit → 24h/6h reminders → 6-week touch-up → retail replenishment → JOIN/BALANCE/REDEEM
clinical	Symptom → no diagnosis; escalate → consult + deposit → aftercare check-in → 6-month recall
fitness	Trial booking → class reminders → streaks → win-back → PT upsell
hospitality	Party/time booking → menu/delivery FAQ from real menu → reminder + map → review → loyalty → quiet-hour flash offer → birthday dessert
retail	Cart recovery 1h/24h/72h → order updates → replenishment → VIP early access
education	Assessment booking → parent progress reports → fee reminders → re-enrolment
pet_services	Vaccination schedule reminders → grooming rebook → food replenishment → pet birthday
professional_services	Lead qualification → consult booking → document chase → invoice follow-up 30/60/90
construction_property	Quote follow-up → availability checks → progress-billing reminders
financial_protection	Lapsed-policy reinstatement → pre-approved offers only → failed-debit retry → renewal reminders; escalate complexity
real_estate	Portal lead <60s → viewing booking → buyer qualification → mandate follow-up; private rooms

Universal guardrails: STOP/STOPPE/UNSUB honoured instantly · business hours (default 09:00–17:00 SAST, configurable) · max attempts (default 3) · escalation triggers (2+ objections, clinical/legal question, high-value, frustration, explicit request) with full-context handoff · LiveSignal contextual first message (never "Hi! How can I help?") · payment links only via provider; revenue confirmed only by verified webhook.

§7–§8 Feature-Usage Matrix & Integrations (per pack)

Engine feel differs per pack exactly as Corrected Master v1 §5–§6 (Demand Radar sources, Content Engine topics, Distribution channels, Conversation jobs, Conversion shape, Retention cycles, Recovery targets, Intelligence metrics) — retained verbatim, extended to all 13 via nearest-sibling rule. Integrations per pack retained verbatim (core + industry-specific, offered not forced; browse-all fallback; never a blank marketplace).

§9 LiveSignal — Website Conversation Intelligence (canonical Phase A)

Principle: event/intelligence layer FIRST, chat UI second. Phase A works with zero WebRTC; demo harness is the event source; Phase B swaps in real transport through the same boundary.

- **Schema:** `live_rooms` (tenantId, urlPath, mode community|assist|private, peerCount; unique tenantId+urlPath) · `live_signals` (type intent|objection|proof|question, category, snippet, confidence, count, consentStatus) · `live_leads` (visitorPhone, question, context, converted, leadId).
- **Classifier:** deterministic keyword rules first; tool-grounded AI fallback only on low confidence. Categories: price, availability, urgency, financing, value_objection, social_validation, logistics, purchase_intent. **Urgency → AI intercept always**, regardless of room mode.
- **Privacy at ingest:** classified payloads only; raw transcripts stripped, privacy-logged, never stored/returned.
- **Proof consent gate:** proof → pending; publishing hard-blocked in service layer until granted (negative-tested invariant).
- **Radar feed:** source='livesignal', same traceability, same 3-question promotion → ContentBrief (lead_gen / objection_handling / testimonial).
- **Contextual handoff:** lead convert → WhatsApp first message references actual question/intent/page (asserted).
- **Owner UI tree:** LIVE NOW (visitors/rooms/peers) · SIGNALS (intents/questions/objections/proof) · CONVERSION (high-intent/leads/"Continue on WhatsApp") · CONTENT OPPORTUNITIES (repeated questions/spikes/Create content) · PROOF INBOX (pending/approved/published) · SETUP (install script + Test connection).
- **Demo harness:** "Simulate visitor activity" = labelled dev/demo harness; never presented as real data in production.
- **Phase B gate:** no WebRTC install/implement, no temporary widget, no second chat architecture until the verification table is 100% PASS with evidence.
- **Verification table (15 rows, evidence required):** exists in sidebar · no visitor-chat remnants · tenant isolation · classifier golden suite · privacy · webhook signed+idempotent+classified-only · proof blocked pre-consent · contextual first message · radar source-tagged · 3×→brief/2×→none · correct mode per audited pack · clinical/financial never community · home_services urgency intercept · demo harness realistic · lint+zero-env build+selftest+E2E green.
- **DoD chains:** simulated visitor → signal → LiveSignal → Radar → 3× → brief → lead → contextual handoff → Revenue OS; and proof → pending → cannot publish → granted → authorized.

§10 Content Engine + Publishing (closed loop)

- **Generation:** brief + Marketing Context → per-format assets (reel hook/body/CTA/caption · 6-slide carousel · platform post variants · SEO title/meta/H2/draft · GBP update) with `utmTag 2lf_{brief}_{format}_{platform}`.
- **Quality gate (in order):** FACT CHECK (tool-verified; AI never invents numbers) → BRAND → COMPLIANCE (ruleset-gated) → CTA → DUPLICATION (<0.85) → PLATFORM FORMAT. `qualityScore` weighted.
- **Approval modes:** manual · semi (auto ≥0.9 clean) · autonomous (≥0.95 + approved types + zero flags) — per tenant, audit-logged.
- **Publishing:** Postiz adapter (mock when unconfigured; ADR-005) · idempotent publish · cron engagement sync · capability matrix per platform (never assume a capability).
- **Attribution + feedback:** UTM lead → booking → verified payment → revenue on asset/brief/signal; revenue-positive topics raise DemandSignal weights. Analytics shows impressions→leads→**verified revenue** per asset/brief.

§11 Bookings + Customer 360

- **Bookings:** availability slots with capacity · transactional double-booking prevention (409 on conflict) · reminders 48/24/6h (idempotent flags) · no-show auto-detection · waitlist-ready. AI tool `create_booking` in registry.
- **Customer 360:** real aggregated timeline (messages, payments, bookings, opportunities, audit) · score + reasons/risks · one-click conversion actions · suppress/opt-out with confirm + audit.

§12 Universal Owner Usage Skeleton

Morning: read AI briefing (WhatsApp + card) → react to alerts (one-tap) → weekly: approve content (Approve/Edit/Regenerate) → check Rand-leakage report + Recovery Score trend → occasionally: launch pre-built campaign, review/take over conversations. Only vocabulary and priority order change per pack.

§13 Success Criteria

AI coding assistant (all rows PASS with evidence): terminology switch zero-hardcode (grep clean) · dashboard composition per pack · onboarding for all 13 packs zero-undefined · compliance gating negative tests · integration offering per §8 · data isolation (config lookup, leak suite) · LiveSignal 15-row table · theme tokens AA · no inert controls · funnel monotonic · one money formatter · every recovered figure webhook-traceable.

Business owner (yes within 30 days): "speaks my language" · "money, not vanity metrics" · "I know what to do next" · "nothing falls through the cracks" · "content sounds like my business" · "I trust the numbers."

§14 Production Quality Standard (universal adoption)

- **Gate library:** Kickoff #1/#20/#3 · Feature #2 · UI #8 + Anti-AI-Look · Schema #6 · AI #7 · QA #10 · Pre-demo #9 No-Demo-Ware · Pre-launch #18 Break-My-App + #5 Security · Compliance #14 · Launch #19 Pre-Launch Gate (13 categories 0–10 **with evidence**) · Post-launch #11/#13 · Monetization #15 · Enterprise #4/#16/#17.
- **Evidence-only rule:** no "production-ready/secure/complete" claim without test output, logs or screenshots.
- **ADR registry:** 001 Prisma sandbox · 004 WebChat Type-3 adapter · 005 Postiz default · 006 Prisma production MVP (review at 10 paying tenants) · 007 industry_packs table scale-up · 008 **superseded** · 009 light theme.

§15 Launch & 10,000-User Readiness

- **L1 Production:** Neon prod (pooled) + audited migrations · Vercel prod green · production data hygiene (no demo numbers in real tenants; seeder gated to isDemo) · ADR-006 recorded.
- **L2 Real integrations:** Clerk prod · Render workers (Evolution + Postiz) + GitHub keep-warm · Ozow/Yoco sandbox round-trip with signature verification · cron-job.org jobs (reminders hourly, no-shows hourly, engagement 6h) with CRON_SECRET · selftest all-"ok".
- **L3 Hardening:** 20-point security checklist · POPIA (consent, opt-out, retention, delete - customer endpoint wiping AI memory, audit) · AI golden suite + injection probes · Playwright **against production URL** (incl. Sandton flywheel spec) · Sentry + structured logs + selftest alerts · rollback tested · dress rehearsal (founder, incognito, live URL, every step screenshotted).
- **Scale plan:** 100 users = as-is · 1,000 = Neon pooling + Upstash rate limits/AI cache + job batching · 10,000 = Evolution instance-per-tenant autosized, Postiz capacity review, tenant-batched crons, read-heavy caching, Playwright smoke per deploy. **No microservices until metrics demand** (extraction-ready modules only).

§16 Go-To-Market

- **Targets:** Tier-1 franchises — Sorbet 200+, Legends 70+, Pedros 200+, Barcelos 120+, RocoMamas 100+, Body20 60+, Absolute Pets 200+, Martin's 170, AVBOB 350+ · Tier-2 B2B — TALISMAN 150+, Italtile, PostNet (505, strategic exception), Midas, Car Service City, Easylife Kitchens, Jawitz/Just Property.
- **Franchisor pitch:** "We turn every branch into an always-on revenue engine" → show the 12-step chain (demand → mining → content → publishing → social reply → WhatsApp → qualification → booking/deposit → database → loyalty/retention → quiet-hours → recovery → attribution). Sell one HQ dashboard rolled across 10–200 branches.
- **Commercial:** Acquisition R4,999–7,500/mo · Revenue OS R9,999–16,500/mo · Full Workforce R16,500–25,000+/mo · Enterprise R28,000+/mo · **results-based option:** R0 + 10% recovered (Starter) / R2,495 + 7% (Growth); fee trigger = verified webhook.
- **Demo:** Sandton Aesthetic Clinic 14-step flywheel (TikTok question → detection → micro-reply → question bank → 3× → multi-format content → Postiz publish → click → WhatsApp qualify → booking → Yoco deposit → R1,000 recorded → attribution) — runnable end-to-end via the demo seeder + Playwright spec.

§17 Future Packs Rule

Any pack #14+ uses the §4 row shape (sidebar · ordered widgets · AI job · leaks · outcome) + §2 quick-start + §6 flow + §8 integrations + ruleset + liveRoomMode, zero-leak tests extended on merge. **One engine, N presentation layers — forever.**

End of Launch Master v2. This document + Master PRD v4.0 = single source of truth for build, launch, and scale.
